

To Split Input into Tokens, Identify Delimiters, Handle Whitespace, Create Token Structures, Validate Token Streams, Debug Parsing Output

Code:

```
geya@LenovoL480: ~/OS/Skil × + v
GNU nano 8.7.1
#include <stdio.h>
#include <string.h>

int main() {
    char input[100];
    char *token;

    printf("Enter a command: ");
    fgets(input, sizeof(input), stdin);

    token = strtok(input, " \n");

    while (token != NULL) {
        printf("Token: %s\n", token);
        token = strtok(NULL, " \n");
    }

    return 0;
}
```

Output:

```
geya@LenovoL480:~/OS/Skill/Week 2$ gcc task3.c -o task3
geya@LenovoL480:~/OS/Skill/Week 2$ ./task3
Enter a command: ls -l
Token: ls
Token: -l
geya@LenovoL480:~/OS/Skill/Week 2$ ./task3
Enter a command: ls -l Documents
Token: ls
Token: -l
Token: Documents
geya@LenovoL480:~/OS/Skill/Week 2$ |
```
